IT SERVICES

IT has high potential in terms of employment and revenue generation. The IT manufacturing sector is growing at an average rate of 11.99% in the current fiscal year and 10.22% growth the previous fiscal year. Software industry continues to contribute a major portion of Bangladesh IT industry's revenues. According to the IT vision of Govt. of Bangladesh, at present, the sector's contribution to GDP exceeds 32%.

With the dedicated and adroit employees at VMSL, it has been adept in assisting the growth of the nation in the field of Information Technology. VMSL with its vision of quality and innovation has been successful in catering the needs of those who seek our assistance in following areas of IT enabled services:

- Software Solutions
- Web Solutions
- Cyber Security
- Graphic & Multimedia Solutions
- Quality Assurance & Testing
- Offshore Development

Software Solutions

VMSL has developed a number of products and applications for its clients in this service. Our mature software development processes, combined with excellent infrastructure have significantly increased the "on-time and on-budget" delivery of software. Our services begin from analysis, moving through designing, development, testing and implementation to maintenance. Our applications come in all sizes, be it a one-table database.

We offer:

Application Development
- Interactive Application Development
- Custom Application Development/ Maintenance
- MIS and ERP Solutions & Support
- Android and iOS App development integrating with ERP solution

Application Development

Interactive Application Development

Interactive Application Development (iAD) is about harmonizing art with technology. This business division of VMSL complements the client's requirement of online and desktop applications - be it a workgroup solution or mailing platform. It adds a further arc to the circle of 'Net Totality'.

A strong team of software professionals empowers the application development capability at iAD, VMSL. The applications developed range from Web-stores, online service retailing to enterprise information systems. Our competencies in .Net technologies, ASP, XML, PHP and C/C++ are demonstrated in various network-based applications. SQL/ Oracle database engines support most of these applications.

Custom Application Development/ Maintenance

It is a well-known fact that some of the ready-made, packaged applications have failed to meet the requirements of the customers because of their unique needs and differing business
practices and processes. In addition, prohibitive cost of implementing a packaged application and the maintenance thereafter becomes an unwelcome perspective.

We have experienced IT Consultants for Project analysis, formulation and concept planning, right up to project management and installation. We develop customized Software that is completely based on user's requirement with GUI (graphical user- friendly interface) on any of the mentioned platform / languages

MIS and ERP Solutions & Support

We offer customized low-cost solutions to industries based on open standards, contemporary technologies and maintenance support. While incorporating the best of business practices, we do take special care of the customer requirements.

ERP Solutions include the development of software in a distributed model, with some phases of the project being conducted onsite and others being conducted offshore. Each phase is uniquely defined and executed. After unit, and system testing the product is then sent to the client for acceptance testing. We have satisfied customers find the solutions user friendly, flexible, and comprehensive.

Android and IOS Application

People are more comfortable with their smartphone now a days. We offer both Android and IOS application for our client. We develop strong and swift API for Apps. So ERP system or Accounting software of a company can be easily used from a smartphone.

Web Solutions

VMSL provides web solutions & services to help customers reach to a wider customer base. The web is a new and different medium for communication and requires a different viewpoint and skill set to use it in the most effective way. Businesses need web consulting to get more return on investment in web site. We can help get the most effective solution through:

- Website Development
- E-commerce

Website Development

Websites can enhance awareness of brand, leading to more sales. It is easier to build relationships with customers, vendors, and shareholders through online identity and get:

- more traffic from the search engines
- fast loading web pages with excellent navigation and designing,
- communicate more effectively

We can help our clients acquire both Dynamic site and a static site. We offer web sites on flash, asp, PHP which are tailor made to target customers and make our clients' presence live on web.

E-commerce

We offer e-commerce services in custom-built solutions as well as packaged software customizations and implementations. This helps customers to heave their business from point of sale implementation and go global. Our competent management team, good post-sales services, well-organized business structure, network infrastructure and a secured, well-designed website will ensure ripe results on your investment.

Cyber Security

We help our clients to build or rebuild Cyber Security practices that deliver real value. We manage IT security services such as firewalls, intrusion prevention, security threat analysis, proactive security, vulnerability and penetration testing and incident preparation and response, which includes IT forensics.
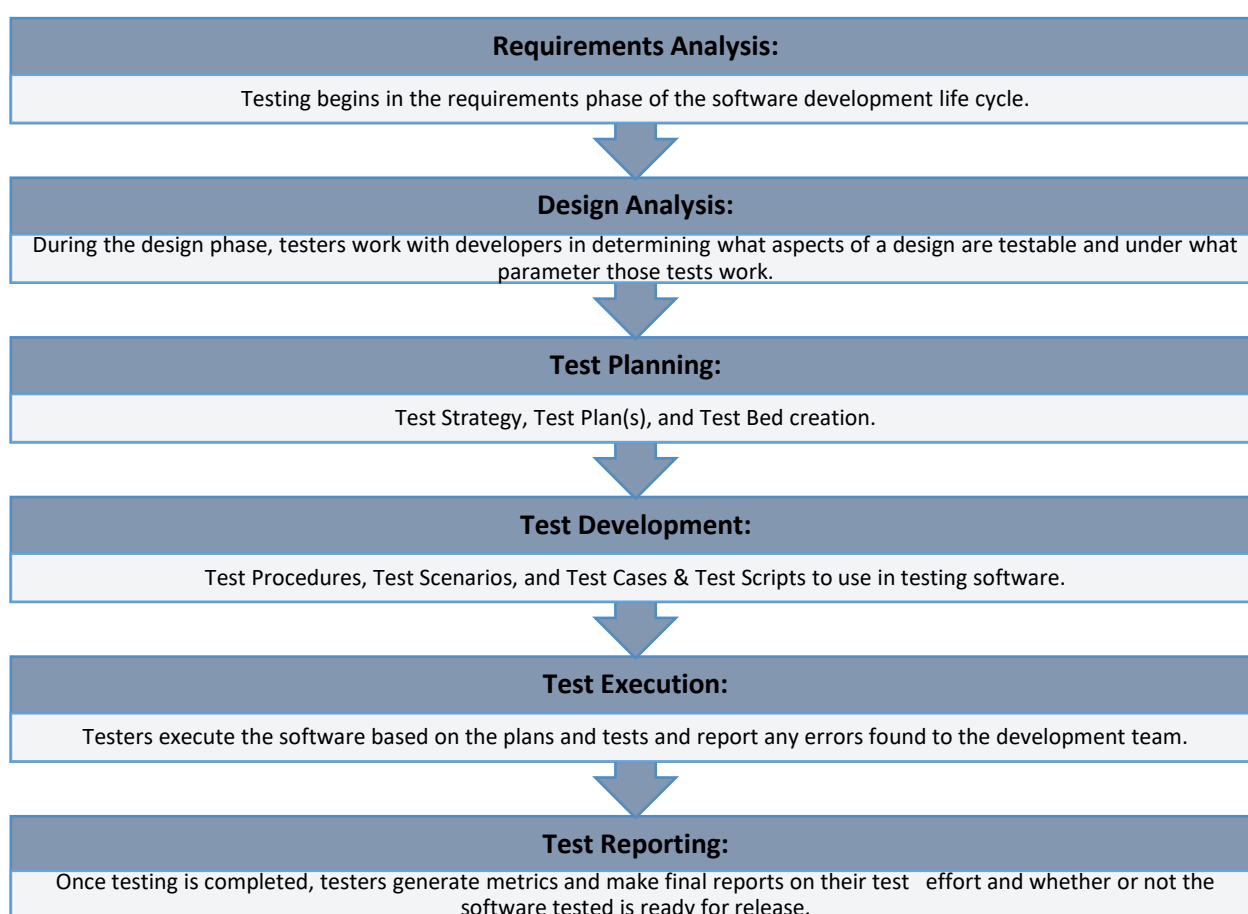

Graphics & Multimedia Solutions

Each Client is different with his own ideology and vision, so should be his designs. Having done more than 200 design solutions, we lend our services for:

Logos, Brochures, Advertisements, Corporate Profile Presentation, Product Catalogue, GIF, Digital Campaign Banner, Product Explainer Video, Training/ Tutorials Presentation, 2D-3D Animation and Walkthrough.

Quality Assurance & Testing

All the software solutions developed undergo following cycle of testing:

| **Requirements Analysis:** |
| Testing begins in the requirements phase of the software development life cycle. |

| **Design Analysis:** |
| During the design phase, testers work with developers in determining what aspects of a design are testable and under what parameter those tests work. |

| **Test Planning:** |
| Test Strategy, Test Plan(s), and Test Bed creation. |

| **Test Development:** |
| Test Procedures, Test Scenarios, and Test Cases & Test Scripts to use in testing software. |

| **Test Execution:** |
| Testers execute the software based on the plans and tests and report any errors found to the development team. |

| **Test Reporting:** |
| Once testing is completed, testers generate metrics and make final reports on their test   effort and whether or not the software tested is ready for release. |

Retesting the Defects:

In this cycle applications are passed through following **levels of testing**:

✓ Component testing tests the minimal software item that can be tested.

- ✓ Component integration testing exposes defects in the interfaces and interaction between integrated components.
- ✓ System testing tests an integrated system to verify that it meets its requirements.
- ✓ Acceptance testing allows the end-user or customer to decide whether or not to accept the product.
- ✓ After modifying software, either for a change in functionality or to fix defects, a regression test re-runs previously passed tests on the modified software to ensure that the modifications haven't unintentionally caused a regression of previous functionality.

Offshore Development

To get the best IT solutions, clients don't need to be geographically near us. That's because we offer quality offshore development center. Our offshore software solutions in application development and web site development guarantee cost savings without the need to compromise on either speed or quality.

DIGITAL MARKETING SERVICES

Animated Video Campaign

Creative advertisement animation is the most powerful and profitable way of promoting companies' products effortlessly. Creative animated advertisements include various creative visual elements which attract consumers with more effectiveness to showcase their values and identity that work well on both television and internet platforms.

Web Promotion

We can promote your site to acquire more traffic, more enquiries, more leads, and more value. Web Promotion is a three-phase process and we are your companion to see you through all the phases and that too very well. We promote your website in different search engines like Google, Yahoo, Bing and other partner search engines. Our Google ad word campaign will make sure that your web site is in the top of all searches. Dynamic search campaign will show your website to your potential customer everywhere they visit. Through social media we will promote your website and bring you ultimate traffic to your website. To make it easy for you know about your website traffic we will set an analytics account for your website by which you will always catch up with your site traffic.

Search Engine Optimization

Your website doesn't mean anything to anyone unless it can be found by your customers. Phase two in Web Promotion is optimizing your site so it appears high in the search engines and uses them to bring even more people to your pages. Our Web development and Promotion methodology, caters to the best of breed processes which helps in a successful on-time and above expected delivery. Phase three ensures that your site attracts even more traffic for which our experts go over techniques like reciprocal links, email signatures, newsletter articles and more. In Order to good SEO we need to follow these steps-

01. SEO Project Brief
02. SEP Keyword Research
03. Identity SEO Competitor
04. Technical SEO Audit
05. SEO Backlink Analyze

06. SEO Content Writing
07. On-Page SEO
08. Local SEO citation
09. Off-Page SEO
10. High DA Link building

Social Media Campaign

Yes, social media campaign and we are the master of it. We can target any group of customers through social media like Facebook, Instagram, LinkedIn, YouTube, Twitter etc. We just not only boost post but also, we research, understand your product or services, and investigate your competitor and then we come up with a plan for next 3-6 month. We develop content based on your goods structure. Our expert graphical team will come up with best creative design for your product or services. Then we set up a target market. We don't believe in mass marketing for all the goods. A regular person will not buy an expensive watch or gadget. So, we target those who could be your potential customer and then we campaign. We just don't do one campaign because people choice and interest could be different. So, for each product we do 4 test AD. We observe those ads for few days. According to those ads result we can easily find out what type of ad is creating more impression among your target customer. Then we focus those type of ad and mass market those. These bring us the most success for every product or services. We also do collect client info. We track them and their choice of goods and promote those according to customer's choice.
